

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning on page 10, line 18, with the following rewritten paragraph:

– Figure 4 is a flowchart illustrating the read process according to one embodiment. A list of unique identifiers is received (400). It is then determined whether all the unique identifiers in the list have been processed (402). If not all of the unique identifiers have been processed, then the data location that corresponds to the next unique identifier in the list is looked up (406). The data segment is then retrieved from the data location (408). Control is then transferred to 402 to once again determine whether all the unique identifiers have been processed. If it is determined that all of the unique identifiers have been processed, then the read process is finished (404); otherwise, 406 and 408 are repeated. –

Support for the amended paragraph may be found in Figure 4. No new matter has been added.
